Universal design for learning (UDL) is a framework to improve and optimize teaching and learning for all people.

**CONTENT**

UDL is proactive. **Instructors** provide a variety of course materials for learners to choose from based on their needs and preferences.

Differentiated instruction is reactive. When **instructors** find that some course materials are inaccessible or ineffective for the learners in the course, they adapt or replace the content.

**ACCESSIBILITY**

UDL is focused on providing options. The **instructor** is responsible for selecting a variety of materials that all students can access.

**Developers** are responsible for making sure the layout and functionality of their websites are accessible to all users.

**DIFFERENTIATED INSTRUCTION**

Differentiated instruction is an instructional approach that varies the types of media and teaching approaches used in classroom instruction.

**WCAG COMPLIANCE**

WCAG compliance is an international set of standards used to ensure web accessibility for all users.
