Identifying OS Version

macOS

1. Click on the Apple on the top left of the screen and then click About This Mac.

   ![About This Mac](image1)

2. The OSX name and version number will be displayed on the screen.

   ![OS X El Capitan](image2)

Windows

There are a few ways to identify what version of Windows you are using.

- Using a keyboard shortcut
- Manually open the System Information window
- Looking at the start button

Using a keyboard shortcut

1. Hold down the Windows key and while continuing to hold down that key, press the Pause|Break key.

   ![Pause|Break](image3)
2. This will open the Windows System screen which shows you the version of Windows you have.

Manually open the System Information window

1. Using the Right mouse button, click the Start button and select System from the menu that opens.
   1. If you do not get this menu, using the Left mouse button, click the Start button. Then using the Right mouse button click the Computer menu option. Then click Properties.
2. This will open the Windows System screen which shows you the version of Windows you have.

Looking at the start button

**Windows 10**

The default Windows 10 start button looks like a square divided into 4 smaller squares that is slightly slanted towards the left.

When you click the Windows 10 Start button, it brings up a menu that looks like the menu on the left. It also has the words "Ask me anything" or "Search the web and Windows" next to it which is unique to Windows 10.

**Windows 8.1**

The default Windows 8.1 start button looks like a square divided into 4 smaller squares that is slightly slanted towards the left. It is almost identical (though slightly bigger) than the button in Windows 10.

The biggest difference is that when you click the start button, instead of opening a menu it typically takes you to the **Tile** view of Windows (seen below).

**Windows 7**

The default Windows 7 Start button is a circle with a Windows flag inside. The Windows flag is very colorful and wavy. It also has a bit of a glow to it.

When you click the button, it opens a start menu. Right above the start button it says "Search programs and files." That box with those words appears to be unique to Windows 7.

<tbody>
<tr>
<td>Windows XP</td>
<td>The default Windows XP start button is a green oval that says <strong>Start</strong> in white letters. If you are using the default them, the start button is typically green and the taskbar is typically blue. When you click it the start button the start menu opens. The start menu for Windows XP has the Run button by default (bottom icon on second column of start menu) which was removed from later versions of Windows.</td>
