What is Zoom?

Zoom is a high-quality, easy to use, conferencing solution that provides both video conferencing and screen sharing features. Instructors can share slides or their screen (to demonstrate software, etc.) and record class sessions to share with students. Students can join via software on their computer (for all features) or smartphones (some features not available), or they can just call into the conference for an audio-only connection. This type of software is useful for emergency online learning.
