SMART software and hardware are Hofstra University's preferred active learning tools

The SMART Board interactive whiteboard is a touch-sensitive display that you connect to your classroom computer or laptop. SMART Notebook software is included with the Smart Board and allows users to compile notes, images, and other media into virtual notebooks, which can be projected and interacted with using the SMART Board itself. SMART Sympodiums allow the instructor to annotate, highlight, draw, and write right from the podium display.

Want to make your interactive lessons available to students on their devices, no matter where they are?

Watch the following videos about SMART kapp iQ and SMART amp to learn how you can make it happen!

- SMART kapp® iQ - Getting Started
- SMART kapp iQ Demo for Education
